

CARD PERSONALIZATION SOFTWARE

InstaID

Design, Capture, Manage, Print & Encode

Design templates, Manage Records and Print card using the Intuitive, fast and efficient id personalization Software. Insta ID design module comprise of a wide range of design elements including text, photos, logos and graphics, barcodes etc helps to efficiently design and print high-quality ID cards. The powerful graphic tools enable you to crop, resize and apply enhancement to the images. Different types of barcodes and QR code can be configured in the card design module. Insta ID user interface make easy to capture Photo, Signature and finger print of the card holder

Insta ID Software can connect to various databases like MS Access, SQL, Oracle etc depends on the version of the software. The advanced search option provides fast wildcard searching on any field in the active database. You can easily edit and manage data using the data entry centre. InstaID gives a real time preview of every card during data entry. The system provides a complete solution to perform inline personalization of magnetic strip cards, contact & contactless smart cards for a variety of uses during the print process. Insta ID works with card printers from many different manufacturers.

Integrate with existing system

Insta ID can directly connect to any existing database via ODBC link and integrate with existing HR, ERP, and access control systems without any import or export. The software comes in four editions which offer a powerful range of features for different applications like employee id, visitor cards, membership id and loyalty cards. The Ultimate version of the software is a customizable solution to meet sophisticated requirements which include Automated Biometric Identification Systems and smart card encoding for various id issuance applications like national id, driving license, voter id etc.

Insta ID is instant, easy to manage ID card designing and issuance system. Insta ID provides powerful, user-friendly tools for card design, secure card production and flexible management of complex, integrated ID programs.
